

Silk Scarf Care Guide 2026

Practical care instructions for mulberry silk, cashmere and modal scarves. Always check the care label on the finished product; these are general guidelines.

Washing

- Hand wash in cold water with a mild, pH-neutral detergent.
- Do not bleach, soak for long periods or wring the scarf.
- Rinse gently and press water out in a clean towel; do not twist.
- For structured or hand-rolled pieces, dry cleaning is the safer option.

Drying and ironing

- Dry flat, away from direct sunlight and heat.
- Iron on the lowest silk setting, on the reverse side, while slightly damp or with a pressing cloth.
- Do not iron directly over prints, labels or hand-rolled edges.

Storage

- Store folded, flat and dry; avoid hanging for long periods.
- Keep away from rough surfaces, hooks and sharp jewellery to prevent snags.
- Use a breathable bag or tissue; avoid airtight plastic for long-term storage.

Stains and repairs

- Blot spills immediately with a clean, dry cloth; do not rub.
- For difficult stains, seek professional dry cleaning and tell them the fibre content.
- Do not use household bleach, enzyme detergents or hot water on silk.

Cashmere: hand wash cold with a cashmere shampoo, dry flat, and use a cashmere comb gently for pills. Modal: follow the care label; gentle machine wash may be possible on some qualities.

This guide is general information, not a guarantee for every fabric or finish. Confirm care instructions with your production specification.
